

RELIABILITY AND COMPLIANCE DECLARATION

Manufacturer: IFTER Jerzy Taczalski
Wola Niemiecka 78C, 21-025 Niemce

We hereby declare, under our sole responsibility, that the following devices:

1. RIIS 2. EQU CAP

have been designed in accordance with reliability requirements. The MTBF (Mean Time Between Failures) parameter is a statistical measure of product reliability, representing the estimated average operating time between successive failures. The declared MTBF value is 1,363,104 hours. This value has been determined based on real-world operational data collected over a period of more than 10 years, calculated from the total accumulated operating hours of the devices and the number of recorded failures. The designed service life of the devices is at least 15 years; however, due to ongoing technological progress, technology renewal is recommended after approximately 10 years of operation.

Furthermore, the devices comply with the requirements of the following European Union Directives:

- Directive 2011/65/EU of the European Parliament and of the Council on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS).
- Commission Delegated Directive (EU) 2015/863, amending Annex II to Directive 2011/65/EU of the European Parliament and of the Council as regards the list of restricted substances.
- Commission Delegated Directive (EU) 2024/232, amending Directive 2011/65/EU of the European Parliament and of the Council as regards the exemption for cadmium and lead in plastic profiles in electrical and electronic equipment.
